# Rami Walid

908-247-4657 | ramiwalid5@pm.me | linkedin.com/in/ramiwalid | github.com/ramiwalid | ramiwalid.com

## Education

**New Jersey Institute of Technology** Newark, NJ

*Bachelor of Science in Computer Science, Minor in Applied Statistics* *Sep 2024 – May 2027*

- **Relevant Coursework:** Advanced Data Structures & Algorithms, Intensive Programming in Linux (C), Advanced Database System Design and Management, Computer Architecture, Operating Systems
- **Honors & Awards:** 2x NSF Scholar
- **Activities & Leadership:** Member of ACM Chapter at NJIT

## Technical Skills

**Languages**: Python, Java, C/C++, SQL, TypeScript, JavaScript, HTML/CSS, Swift
**Web & Backend Frameworks**: React, Next.js, Node.js, FastAPI, Spring Boot, Flask, Vue.js, Tailwind
**Cloud, Database & DevOps**: AWS (EC2, DynamoDB), PostgreSQL, Docker, Git, CI/CD, GitLab, Linux/Bash
**AI/ML & Agentic Frameworks**: LangGraph, Promptfoo, Playwright, browser-use, Agentic AI, LLM Agents
**Concepts & Methodologies**: RESTful APIs, OOP, Distributed Systems, Software Testing, Red-Teaming, Agile

## Experience

**Incoming Software Engineer Co-op** Jan 2027 – Jun 2027

*TD Bank* *Mount Laurel, NJ*

- Incoming co-op focusing on enterprise-scale application development, software engineering methodologies, and technical infrastructure

**Undergraduate Researcher - AI Security & Agentic Systems** Sep 2026 – Present

*NJIT Ying Wu College of Computing* *Newark, NJ*

- Architecting a fully agentic evaluation framework (Python, LangGraph, Playwright, browser-use, Promptfoo) to study indirect prompt injection vulnerabilities in web-browsing AI agents
- Designing automated red-teaming pipelines that deploy agents to live and local environments to systematically evaluate susceptibility to adversarial content encountered during autonomous web navigation
- Building reproducible test harnesses and evaluation suites (Promptfoo) to benchmark agent robustness against injected/malicious content across varied deployment conditions

**Software Engineer Intern** Jun 2026 – Aug 2026

*Fiserv* *Berkeley Heights, NJ*

- Interned on the TransArmor software team, a team responsible for encrypting and securing 300M-400M payment transactions per day for the world's largest merchants
- Designed and built a full-stack web application (React, Spring Boot, Node.js, DynamoDB) deployed company-wide for 300+ engineers, replacing a monolithic spreadsheet with role-based dashboards, commit/ticket retrievals, and a manager-report messaging inbox
- Architected an AI-agent-based vulnerability remediation tool (Java, Spring Boot, Maven) integrating Fortify, Jira, and GitLab to automatically ingest security scans, assign remediation dates, generate tracking tickets, and apply real code fixes across 12 core applications
- Automated end-to-end remediation workflow, using AI agents to programmatically apply fixes and submit GitLab merge requests, cutting security compliance gaps from weeks to hours
- Automated CI/CD pipeline and DevOps workflows for the TransArmor team, reducing deployment time through Harness by 85% and saving 20 hours/week
- Projected 80% reduction in manual effort, reclaiming 1,152 developer hours and 108 manager hours annually, and delivering $97,200 in forecasted annual cost savings within a strict PCI DSS compliance environment

**Undergraduate Researcher - Java Developer** Jan 2026 – May 2026

*NJIT Ying Wu College of Computing* *Newark, NJ*

- Engineered and deployed an AWS EC2-hosted Java application providing NJIT students and faculty department-wide access to a powerful mathematical extraction engine
- Built a Java-based extraction engine to automatically identify and parse complex mathematical equations from source documents, cutting manual analysis time by over 90%
- Refactored the automated testing suite to improve coverage and reliability, reducing regression issues and improving developer experience for downstream users
